

INVITATION TO TENDER "ITT" PS20162024

BURRARD MARINA UPLAND INFRASTRUCTURE

QUESTIONS AND ANSWERS NO. 1

March 29, 2017

Q1	I do not see a requirement in the ITT for the development of a Construction Environmental Management Plan or for Environmental Monitoring during works. Will these scopes of work be conducted by the City of Vancouver?
A1	The site is located within the former False Creek shoreline and there is potential that poor quality fill material is encountered that could be contaminated. If suspect or actual contamination is encountered during the work, the Contractor must report this to the City's Project Manager immediately. Management of any contamination will be completed by the City's Contaminated Sites Team. Once the contamination is discovered the City's engaged environmental consultant will timely respond to the issue and CCN - Contemplated Change Notice or a CD or Change Directive will be issued. See Addendum No. 2.
