

REQUEST FOR APPLICATION "RFA" NO.PS20190089-  
IN RESPECT OF MEDIUM AND HEAVY DUTY ELECTRIC TRUCKS

**QUESTIONS AND ANSWERS NO.1**

ISSUED ON: February 27, 2019

Q1	Are you searching for specific vehicle types for specific applications, such as refuse trucks, vans, some other vehicle type? For a specific type of application? And some type of specific competitive bid/pricing on a specific vehicle type? Or just gathering information on vendor technologies sans pricing to see what's available for future projects?
A1	We are looking to pre-qualify medium and heavy duty electric chassis vendors for potential use on future electric truck projects. Pricing (or a pricing formula) for the electric truck chassis models is strongly encouraged, though pricing can be adjusted as required by the vendor throughout the life of the contract. If pricing isn't available, we would very much like to know available models and the availability of those models in Vancouver, Canada.
Q2	Do you have any specific upfitters you like to use? Or are you looking for us to choose the upfitter for you?
A2	We work with a variety of up fitters so we are open to whichever vendors have existing relationship with responding electric chassis vendors. Currently, the City has a contract with Commercial Truck Equipment for the majority of our work.
