

REQUEST FOR PROPOSALS "RFP" PS20201116

PROVISION OF PARKING METER EQUIPMENT

QUESTIONS & ANSWERS NO. 2

ISSUED ON OCTOBER 21, 2020

Q1	Is there a specification for the City's current meter management system that the successful proponent is expected to integrate with?
A1	Detailed requirement 310 identifies the current cloud meter management system: currently, this functionality exists as a csv upload. As part of the implementation, this will be upgraded to a RESTful API. Proponent responses should clearly state, and be based upon their technical preferences and assumptions.
Q2	What does the City mean by "equipment heavy" high service, and "equipment light" low service?
A2	<p>"Equipment Heavy" high service: for this option, proponents may propose a layout which provides functionality to customers in a manner that minimizes the distance travelled to access equipment from a parked vehicle.</p> <p>"Equipment Light" low service: for this option, proponents may propose a layout which provides functionality to customers using as little physical infrastructure as possible.</p> <p>Note: proponents may propose one or both of the above options.</p>
